Variety and functionality in pushbuttons and pilot lights

The CSW line of Pushbuttons and Pilot Lights was **carefully developed** to meet the **operation and signaling** requirements in a wide range of industrial applications.

All items of the line have been designed and present performance **according to the IEC 60947-5-1 and UL 508** standards, allowing their **application on machines and electrical panels** intended for **the most demanding markets of the world**.

Design and Construction

In order to ensure a high quality standard and provide reliable performance for the control and signaling circuits, the products of the CSW line are made with high-end materials.

Their anatomical design allows easy understanding and operation.

The CSW line is also characterized by the robustness, reliability and excellent cost effectiveness. 100% produced in Brazil, the CSW line is a world-class WEG product available for its customers worldwide.

Manufactured in Brazil

Safety and Reliability

The CSW line offers IP66 protection rating, according to IEC 60529 and NEMA 4X as per UL 508, providing proper performance even in environments where contaminants such as dust and humidity are present.

All the CSW line is manufactured with non-flammable and UV-ray-protected materials to ensure safety and reliability in applications outdoors and in aggressive environments.

Easy Assembly

The coupling system of WEG contact or illumination blocks to frontal parts (pushbuttons, selector switches or pilot lights) is made by quick assembly using a dedicated mounting flange with 3 or 5 positions, without requiring any tools. The quick-connecting flanges are installed on the frontal parts with just a click, and they can also be uninstalled from the frontal parts without any tools.

Self-Cleaning and High-Performance Contact Blocks

The contacts of the CSW line are manufactured with special silver alloys, ensuring high reliability and performance to the control circuits, with low current and voltage levels (5 mA / 17 V dc). WEG contact blocks are self-cleaning, which prevents the internal oxidation of the contacts and ensures better electric conductivity to the circuit. In compliance with the requirements of national and international occupational safety standards, such as NR12, the NC contact blocks feature positive opening, which ensures the opening of the contact by means of direct action, regardless of any event, such as contact welding.

Positive opening

Different Applications

WEG has a full line of solutions in order to solve challenging industrial applications. The Pushbuttons and Pilot Lights portfolio includes different types of buttons: double, triple and illuminated (LED technology) pushbuttons, emergency-stop pushbuttons and many other options, together with a wide range of accessories. There are several function and engraving options.

Front-Back Assembly Systems and the New Contact Blocks

By means of special snap fits, the contact blocks can be front-back assembled. This new mounting system allows greater flexibility on contact combination resulting in inventory reduction, since the old double contact blocks are no longer necessary. The AF3F or AF5F flange models must be used for the front-back assembly of contact blocks. The new contact blocks that allow front-back assembly are easily distinguished from traditional blocks due to their new shape and blue color. The AF3F and AF5F flanges are distinguished by the blue color.

PBW Decentralized Control Stations

With a modern design, the PBW control stations are compact and solve a great variety of challenging applications. Manufactured with high-end materials, they ensure excellent performance to applications that require great resistance against impact and bad weather. Their use with frontal parts of the CSW pushbuttons and pilot lights line allows different functions, such as: emergency stop, signaling, starts, stops, among others.

Main Features and Benefits

- IP66/NEMA 4X protection rating: special sealing gaskets assures the water tightness and the protection rating throughout the product life cycle.
- Several cable entries: different knock-out type entries on sides and base, supporting different cable glands with different threads.
- Exclusive ID plate holding system: integrated to the control station, it allows for standard CSW legend.
- Captive fixing screws: ensure safe and easy installation and maintenance.
- Robustness: manufactured in high-performance, non-flammable and UV-protected polycarbonate. Due to their mechanical construction, they offer outstanding resistance to aggressive environments and impacts.
- Special base-mount contact and illumination blocks provide easy installation.
- Safety against electric shocks: manufactured with materials that provide full insulation of live parts, they ensure greater safety to the user without the risk of electric shocks.

Self-Monitoring of Emergency-Stop Pushbuttons

- Emergency-stop pushbuttons are one of the most common and important devices to actuate the emergency stop and indicate dangerous situations on machine and equipment panels. However, if this device is not properly installed, its function will be compromised, and it may put users at risk.
- The BCM01F-CSW monitoring block was developed so as to ensure greater safety to those applications. Its application with the emergency-stop pushbuttons of the BESG/P/Y line ensures proper installation and provides greater reliability for emergency stop systems. When properly fit, WEG emergency-stop pushbuttons prevent inadvertent start or stop.
- Developed according to international IEC 60947-5-5 and UL 508 standards and the Brazilian NR12 standard. Combined with the other collective protective equipment (CPE), it ensures greater safety to your application.

NO contact only closes when the mechanical assembly is correct. When the button is actuated or removed from its position, the NO contact opens and interrupts the electric circuit.

Self-Monitoring of Emergency-Stop Pushbuttons

BESGM, BESPM and BESYM emergency-stop pushbuttons allow monitoring the mechanical assembly using single contact blocks in flange or PBW control station mounting. The CBCSW contact block tie enables turning all the items into a single set, ensuring greater safety and reducing the possibility of operation faults. The only national manufacturer with emergency-stop pushbutton monitoring system mounted in plastic control stations with base-mount contact blocks, ensuring more compact and efficient solutions to your application.

High Performance Illumination Blocks

High brightness LEDs ensure illumination and efficiency (lumens/Watt), with low heat dissipation and energy consumption. Its integrated construction provides high mechanical resistance to vibrations and maintenance-free operation. Its useful life is much longer than illumination by Ba9s-type conventional incandescent lamps.

Certifications

- The products of the CSW line bear several certifications for a great variety of markets and applications.

Note: 1) The PBWL-IP66 control stations are compatible with all models of the CEW line of frontal parts but do not guarantee the IP66 protection rating as the CEW line has an IP54 protection rating. For flush pushbuttons (BFM) and double pushbuttons (BDM) using the silicone protection cover (APBF and APBD), the IP66 protection rating can be guaranteed. It does not allow the mounting of mushroom buttons side by side with other frontal parts; for this assembly do not use the hole next to the mushroom button using the ATR plug accessory. It is not necessary to use the mounting flange for the proper mounting of the frontal parts in the PBW control stations.

Frontal part engraving
According to the table on page 50 of the catalog

Notes: 1) For double pushbutton, use the code with 2 numbers:

2) For triple pushbutton, use the code with 3 numbers:

Available center colors: Red (1) or Blue (4).

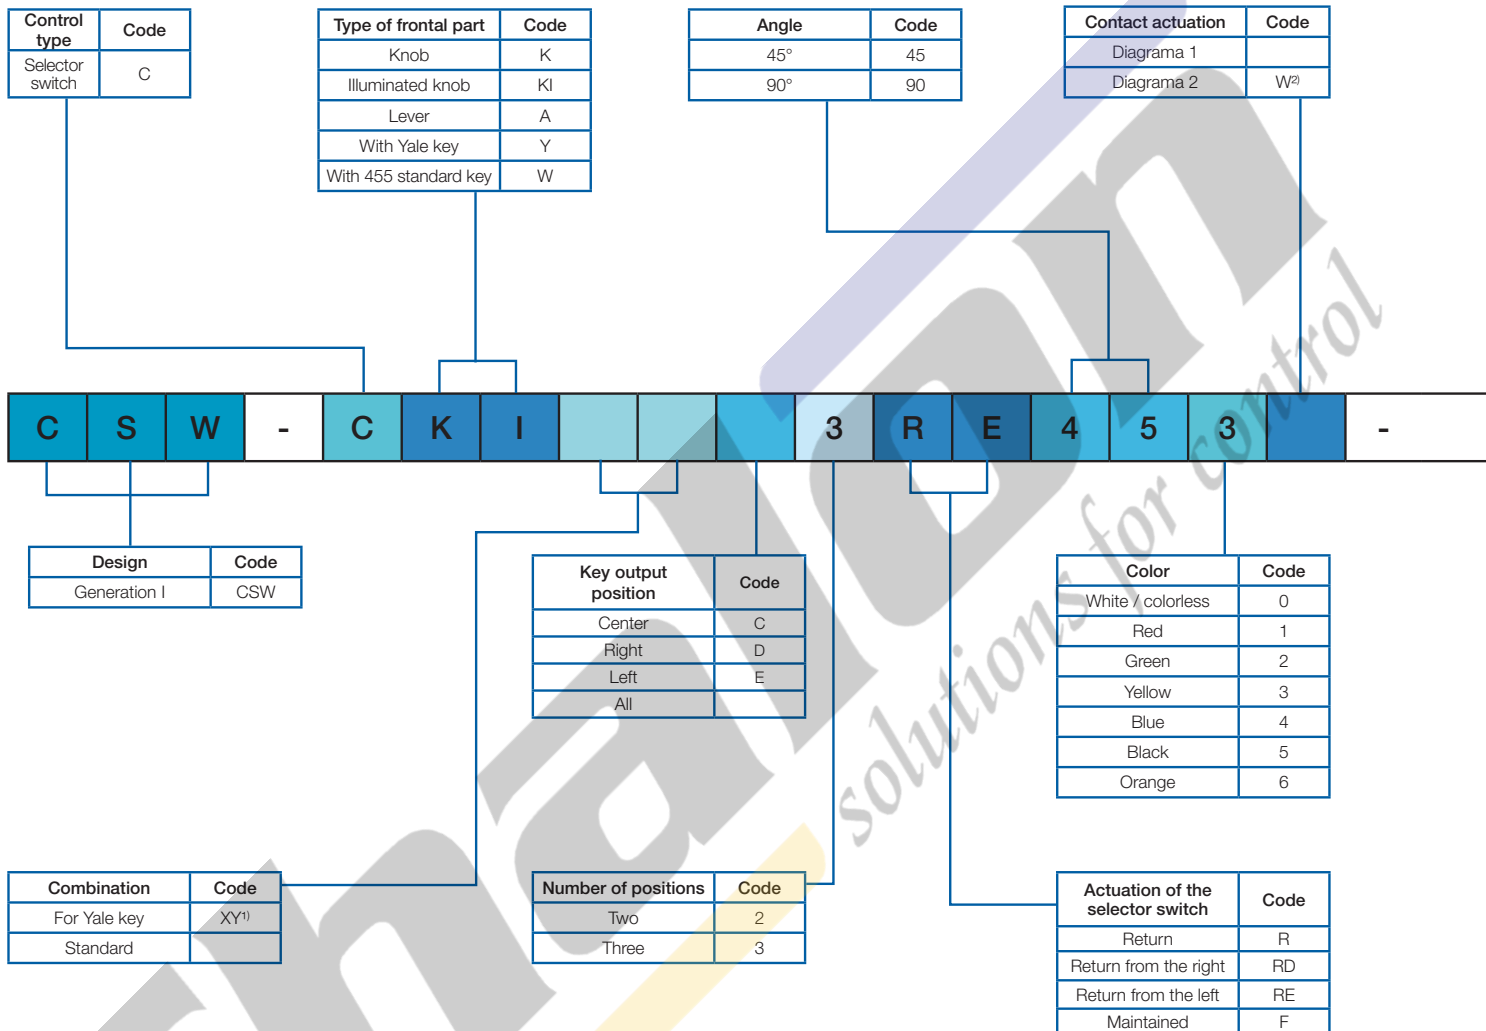

3) Check the maximum number of blocks recommended in the table "Maximum Contact Configurations" on page 53.

This coding is not valid for using the selector switch frontal part type.

Pushbuttons, Selector Switches and Pilot Lights

Applicable standards	IEC 60947-5-1, VDE 0660, UL 508, CENELEC EN 50007, ISO 13850 (EN 418), IEC 60947-5-5
Certifications	CE, cULus, BV, IRAM, PCT, RCC, ICONTEC
Protection rating	IP66 and IP52 (CSW-BD) according to IEC 60529 NEMA1, 2, 3, 3R, 3S, 4, 4X, 5, 12, 12K and 13 according to UL 508
Materials of the frontal parts	Polyamide (PA66) or Polycarbonate (PC)
Mechanical life	
Buttons	3 x 10 ⁶ operations
CSW2-BD and CSW2-BT pushbuttons	2 x 10 ⁶ operations
CSW-BEG/EY/CT/CY/CW pushbuttons	3 x 10 ⁵ operations
Selector switches	1 x 10 ⁶ operations
CSW-BESG/P/Y/W emergency-stop pushbuttons	1 x 10 ⁵ operations
CSW-BESG_I (lighting emergency-stop pushbuttons)	5 x 10 ⁴ operations
Use in environments	Outdoors (UV rays) or indoors
Working temperature range	-25 °C ... 70 °C

Notes: 1) In the central position of the AF5F flange, use illumination blocks only.
 2) Do not use monitoring blocks with the AF5F flange. Do not use emergency-stop pushbuttons with the AF5F flange.

Installation and Mounting

Installation on Flange

Installation on Flange Fitting and Positioning

Latch on the body of the frontal part and holes with slot will prevent the rotation of the frontal part during its mounting or operation.

Latch on the body of the frontal part can be removed for installation in round hole, but it may rotate.

Mounting

Install the frontal part without fastening nut.

Screw the fastening nut.

Tighten with the fastening wrench.

Fit the blocks onto the flange.

Press the snap fit to connect the flange to the frontal part.

Make electric wiring.

Disassembly

Place the screwdriver at the ends of the block so as to disconnect it from the flange.

Press the snap fit to remove the flange from the frontal part.

Installation and Mounting

Installation in PBW Control Stations

Fitting and Positioning

Latch on the body of the frontal part and slot on the holes of the PBW control stations will prevent the rotation of the frontal part during its mounting or operation.

Mounting

Install the frontal part without fastening nut.

Screw the fastening nut.

Tighten with the fastening wrench.

Fit the blocks on the control station base.

Make electric wiring.

Disassembly

Place the screwdriver at the ends of the block so as to disconnect it from the flange.

Global presence is essential, as much as understanding your needs.

Global Presence

With more than 30,000 employees worldwide, WEG is one of the largest electric motors, electronic equipments and systems manufacturers. We are constantly expanding our portfolio of products and services with expertise and market knowledge. We create integrated and customized solutions ranging from innovative products to complete after-sales service.

WEG's know-how guarantees our **CSW Line - Push Buttons and Pilot Lights** is the right choice for your application and business, assuring safety, efficiency and reliability.

Availability is to have a global support network

Partnership is to create solutions that suit your needs

Competitive edge is to unite technology and innovation

Know More

High performance and reliable products to improve your production process.

Excellence is to provide a whole solution in industrial automation that improves our customers productivity.
